Ryan,

We received your request for samples, and per your additional request, we will include a few Minerit samples also. You mentioned you were going to test painting the Minerit, attached is additional information regarding painting Minerit, and sealing vs not sealing. This can also be found on the website.

In order to maintain a valid warranty, Minerit HD requires a sealer or paint coating if it is to be used in an exterior rain screen application. AFCC will not warrant the coating itself or the labor associated with it. Only the base board will be warranted if it is found that an acceptable coating was used and it was put on correctly. The attached file lays out what should be done to ensure the correct type of coating is used and that it gives the desired appearance.

Thank you,

Anna Meissbach
