2011-2018

Andersen Corporation, including its
subsidiaries, has been named a 2019
ENERGY STAR Partner of the Year –
Sustained Excellence Award winner, the
highest honor given by ENERGY STAR,
for continued leadership in protecting
the environment through superior energy
efficiency achievements.

For over a century, Andersen has been helping families make their homes brighter, more comfortable and more beautiful. We do it by making windows and patio doors that are different and better than any others. Our commitment to constant innovation as well as rigorous testing means that you can count on Andersen to deliver unsurpassed quality and reliability, in addition to exceptional service and support.

100 SERIES PRODUCTS

THE SMART ALTERNATIVE TO VINYL

Whether you're replacing, remodeling or building, Andersen® 100 Series windows and patio doors are a smart step-up from vinyl. They provide uncommon value, combining time-tested performance with long-lasting beauty. Made with our innovative Fibrex® composite material, which comes in deep, rich colors, and is environmentally responsible and energy efficient, 100 Series products are a winning choice for anyone considering vinyl windows and doors.

Fibrex material retains its stability and rigidity in all climates, delivering exceptional durability. It makes our 100 Series products rigid and strong, so the weathertight seals stay weathertight.

The finish on 100 Series products has superior scratch resistance compared to painted vinyl windows*, so they'll look beautiful for years to come.

100 Series products can withstand temperatures up to 150°F, even in dark colors, meaning they won't warp due to sun exposure.

* When 100 Series products were tested against five leading competitors' painted vinyl window products.

100 SERIES WINDOWS & DOORS DELIVER BEAUTY, PERFORMANCE & DURABILITY.

ATTRACTIVE CORNER SEAMS.

100 Series products feature **low-visibility corner seams** for a cleaner and more contemporary look.

COLORS THAT LAST.

Durable, factory-finished interiors and exteriors never need painting and **won't fade, flake, blister or peel**,* even in extreme cold or heat.

ATTRACTIVE MATTE INTERIORS.

Premium matte finish isn't shiny like vinyl and is available in white, Sandtone, dark bronze and black.**

ENERGY EFFICIENT IN EVERY CLIMATE.

Energy-efficient 100 Series products are available with options that make them ENERGY STAR® certified throughout the U.S., so they can help reduce heating and cooling bills. What's more, Fibrex® composite material **blocks thermal transfer nearly 700 times better** than aluminum.

DESIGNED FOR PERFORMANCE.

100 Series products are designed to meet or exceed performance requirements in all 50 states.† See pages 103-104 for details.

OPTIONAL PERFORMANCE UPGRADE

100SHS4066 DPUP IG +50/-50

(AAMA/WDMA/CSA 101/I.S.2/A440-08 & -11)

EASY OPERATION FOR YEARS TO COME.

All 100 Series products are **tested to the extreme** to deliver years* of smooth, reliable operation.

SUPERIOR WEATHER RESISTANCE.

Our weather-resistant construction **seals out drafts, wind and water** so well that your reputation is protected whatever the weather.

QUALITY SO SOLID, THE WARRANTY IS TRANSFERABLE.*

Most other window and door warranties end when a home is sold, but our coverage — 20 years on glass, 10 years on non-glass parts — transfers from each homeowner to the next. And, because it's not prorated, the coverage offers **full benefits, year after year, owner after owner** for real added value.

OWNER2OWNER® LIMITED WARRANTY

* Visit andersenwindows.com/warranty for details.

** Units with black, dark bronze or Sandtone interiors have matching exteriors.

† See your local code official for code requirements in your area.

†† 100SHS4066 DPUP IG +50/50 (AAMA/WDMA/CSA 101/I.S.2/A440-08 & -11). Optional PG50 Performance Upgrade is available for most sizes. For more information, visit andersenwindows.com/100series

FIBREX® MATERIAL

STRONG ON PERFORMANCE. GENTLE ON THE ENVIRONMENT.

Developed by Andersen, Fibrex® material is a revolutionary structural composite material that blends the very best attributes of vinyl and wood. Fibrex material saves on natural resources because it is composed of 40% reclaimed wood fiber by weight. Special polymer formulations surround and fill each wood fiber, enabling top performance. The result is a material that provides uncommon value and enhances the quality of any project. In use for over two decades in Andersen® products, Fibrex material has proven its strength and durability in all types of climates.

REVOLUTIONARY BUILDING MATERIAL

- Twice as strong as vinyl, so weathertight seals stay weathertight
- Blocks thermal transfer nearly 700 times better than aluminum to help reduce heating and cooling bills
- Retains its stability and rigidity in all climates for exceptional durability
- Offers superior scratch resistance compared to painted vinyl*

ENVIRONMENTALLY RESPONSIBLE

- Since Andersen developed the highly sustainable Fibrex material, reuse of waste wood fiber has prevented the harvesting of nearly 90 million board feet of timber
- 100 Series products can help builders earn LEED® points in three key categories: Energy & Atmosphere, Materials & Resources and Indoor Environmental Quality
- 100 Series products meet or exceed California Section 01350 Specification, a California indoor emission standard — one of the toughest in the country
- Like all Andersen products, 100 Series products are designed to last** and help reduce future waste streams

See how Andersen created Fibrex material at andersenwindows.com/fibrex

* Visit andersenwindows.com/warranty for details.

** When tested against five leading competitors' painted vinyl window products.

STABLE & PREDICTABLE

Fibrex® material is twice as stiff as vinyl. This strength makes it a better choice over time.

STIFFNESS

DURABLE & RELIABLE

All materials expand and contract when exposed to extreme temperatures. In these types of conditions, Fibrex material performs twice as well as vinyl, which can bow and crack over time.

THERMAL EXPANSION

AN EXCELLENT INSULATOR

The built-in thermal qualities of Fibrex material mean that less heat and cold get transferred through the unit into your customers' homes. As an insulator, it is on par with vinyl and far superior to aluminum.

THERMAL CONDUCTIVITY

MOISTURE-RESISTANT

Because Fibrex material combines wood fiber and a special polymer formula, water has a tough time penetrating. The result is an increased resistance to rot.

DECAY OF MATERIALS

HEAT-RESISTANT

Fibrex material can withstand temperatures in excess of 150°F, even in dark colors.

ANDERSEN DELIVERS, WHATEVER YOUR PROJECT.

NEW CONSTRUCTION

You'll find a 100 Series window or door to match any project from commercial to residential — no matter the location. And with uniform sight lines, it's easy to specify 100 Series products for the entire project.

An **extension jamb attachment flange** is available for easy application of extension jambs on the jobsite.

Single-hung drywall pass-through windows have an upper sash that can be easily removed on the jobsite after the window is installed. With both sash removed, drywall can easily fit through upper floor windows.

1 3/8" Flange Setback Frame

has an integral installation flange that makes it easy to install windows into a new opening and helps make sure the windows and doors are weathertight.

1" Flange Setback Frame with Stucco Key

has a stucco key to eliminate gaps that can result from the natural contraction of exterior stucco. The integral installation flange makes it easy to install windows into a new opening and helps make sure the windows and doors are weathertight.

REMODELING & REPLACING

Whether you're adding or updating, Andersen® 100 Series windows and patio doors enhance any project with beauty, craftsmanship and time-tested performance. Available in a variety of styles, shapes and colors with custom sizing in $\frac{1}{8}$ " increments, 100 Series products allow you to create the look your customers want. The no flange frame options also include predrilled through-the-jamb installation holes and installation screws to save you time.

No Flange Frame allows for full removal of the existing window in situations where the frame is rotten or damaged. The no flange window is then installed into the existing rough opening.

Insert Frame provides fast and easy window replacement when installing the window into an existing window frame without disturbing the interior or exterior trim, saving time and money. The exterior accessory kerf allows for convenient finishing of the window. An exterior sill extender is available to fill the gap at the sill. Exterior frame extenders and a head expander are also available.

WINDOW & DOOR TYPES

CASEMENT & AWNING WINDOWS

Casement windows are hinged on the side and open outward to the left or right, while awning windows are hinged at the top and open outward. Both are also available as non-operating stationary windows.

Sandtone

Twin Casement

Picture with Flanking Casements

SINGLE-HUNG WINDOWS

Single-hung windows feature a fixed upper sash with an operable lower sash that slides up and down. For convenience, the hardware locks automatically when the window is closed. An arch single-hung is also available to add architectural interest.

Dark Bronze

Twin Single-Hung

Arch Single-Hung

Picture with Flanking Single-Hungs

GLIDING WINDOWS

Gliding windows have one stationary sash and one operating sash that glides horizontally. A three-sash configuration, where two sash glide past a fixed center sash, is also available.

Black

Gliding
Active-Stationary

Gliding

Available in custom sizes to fit all projects.

PICTURE, TRANSOM & SPECIALTY WINDOWS

Choose from a variety of shapes to make a signature statement or provide a delicate lighting accent. Shapes include arch, Springline™, half circle, quarter circle and rectangular picture or transom windows. Custom shapes are also available including: full circle, triangle, trapezoid, pentagon, octagon and unequal leg arch windows.

Terratone

GLIDING PATIO DOORS

Patio doors feature one stationary panel and one operating panel that glides smoothly on adjustable rollers. They feature a multi-point locking system for enhanced security and an optional exterior keyed lock for convenience. Sidelights and transoms are also available.

White

COLOR OPTIONS

EXTERIOR COLORS

100 Series windows and patio doors come in five exterior colors, including dark bronze and black — colors that are darker and richer than those of most vinyl windows.

Cascade and Reed patterns are only available in a vertical orientation.

GRILLE OPTIONS

Grilles for Andersen® 100 Series windows and patio doors are available in a wide variety of patterns to complement virtually any style of home. Plus, they have options for easy cleaning and architectural authenticity many vinyl windows can't match.

Finelight™ Grilles-Between-the-Glass

make glass easy to clean. They have an elegant, sculpted profile, plus they offer a two-sided color scheme, allowing them to match both the interior and exterior of the window or patio door.

Finelight Grilles-Between-the-Glass with Exterior Grilles

make interior glass easier to clean, while permanent exterior grilles provide architectural style and detail.

Full Divided Light

feature grilles permanently applied to the interior and exterior of the window with a spacer between the glass for an authentic look.

Simulated Divided Light

offers permanent grilles on the exterior and interior with no spacer between the glass.

CREATE 2-WAY COMBINATIONS WITH 100 SERIES WINDOWS.

NEW!

Design with monumental window combinations in mind that maximize light and view and make a signature statement in any home or commercial building.

Andersen® reinforced joining options provide enhanced performance, design flexibility and the ultimate in jobsite conveniences. This innovative joining system utilizes the strength and durability of fiberglass construction and allows window combinations to be joined at the factory, on the jobsite or in the rough opening. For more information, visit andersenwindows.com/joining.

Coming Soon

Easy Connect Joining System

Receive lighter, easier-to-handle, pre-assembled smaller combinations that join together as you install them into the rough opening, making it easier to install large combinations.

In fact, most contractors surveyed said they could **reduce the number of installers by 50% using the Andersen Easy Connect Joining System.***

This innovative patented system utilizes 5 1/8" (130) interlocking fiberglass joining plates.

Factory-Joined Combinations

Eliminate the need for jobsite assembly and receive fully joined, factory-assembled window combinations to fit rough openings up to 12' x 8' or 8' x 12'.

Dimensions in parentheses are in millimeters.

WINDOWS

FEATURES

CASEMENT & AWNING

Frame

A Frame constructed with Fibrex® composite material. This construction produces a rigid frame.

B Durable, low-maintenance finish won't fade, flake, blister or peel.*

Concealed receiving brackets mounted on the hinge side of the frame keep the sash tightly secured within the window frame when closed.

C Four frame options available, see below.

Sash

D Fibrex material construction provides long-lasting performance.* The sash, finished with a durable capping, provides maximum protection and a matte, low-maintenance finish.

E The dual weatherstrip system combines both an exterior watershed design and a bulb weatherstrip seal between the sash and frame. The result is a long-lasting*, energy-efficient barrier against wind, water and dust.

Glass

F A glazing bead and silicone provides superior weathertightness and durability.

G See below for details.

Hardware

Sash operator provides almost effortless opening and closing, regardless of unit size.

Long-lasting stainless steel hinge channels are used at the head and sill to provide easy operation.

Single-Action Casement Lock

Single-action lock easily releases all concealed locking points on casement sash. The lock and folding handle match the window's interior color.

Awning Sash Locks

Awning sash locks provide an added measure of security and weathertightness. Awning hardware style and color options are compatible with 100 Series casement windows to ensure a consistent appearance when used in combination designs.

SINGLE-HUNG

Frame

A Frame constructed with Fibrex® composite material. This construction produces a rigid frame.

B A durable, side-loaded balancer provides for easy sash opening and closing. The lower sash can be removed without the use of tools.

C Durable, low-maintenance finish won't fade, flake, blister or peel.*

D Four frame options available, see below.

E Weep holes are located on the exterior nose of sill for proper water management.

Sash

The lower sash has a meeting rail cover with a unique raised profile design, allowing the sash to be opened and closed easily.

F Fibrex material construction provides long-lasting performance.* The sash, finished with a durable capping, provides maximum protection and a matte, low-maintenance finish.

G Dual-felt weatherstrip provides a long-lasting*, energy-efficient barrier against wind, water and dust.

Glass

H A glazing bead and silicone provides superior weathertightness and durability.

I See below for details.

Hardware

Sash Lock

Sash lock engages automatically when lower sash is closed. The standard sash lock matches the window's interior color. An optional sash lift is available.

Sash Options

Reverse Cottage Style

Arch Single-Hung

COMMON FEATURES

Frame

Four frame options include:

- 1 1/8" (35) flange setback for siding applications. An integral rigid vinyl flange helps seal the unit to the structure.
- 1" (25) flange setback with stucco key. An integral rigid vinyl flange helps seal the unit to the structure.
- No-flange option for window replacement in an existing framed opening.
- Insert option for window replacement in an existing window frame.

Glass

Glazing bead and silicone provide superior weathertightness and durability.

High-Performance glass options include:

- Low-E SmartSun™ glass
- Low-E SmartSun HeatLock® glass
- Low-E glass
- Low-E HeatLock glass
- Low-E Sun™ glass
- Clear dual-pane glass

Tempered glass and other glass options are available. Contact your Andersen supplier.

A removable translucent film helps shield the glass from damage during delivery and construction and simplifies finishing at the jobsite.

Patterned Glass

Patterned glass options are available. See page 12 for more details.

Performance Grade Upgrades

Optional performance grade upgrades are now available for select sizes allowing units to achieve PG50. Performance Grade (PG) Ratings are more comprehensive than Design Pressure (DP) Ratings for measuring product performance. Choosing the PG50 Upgrade does not change the appearance of the unit.

FEATURES**GLIDING****Frame**

A Frame constructed with Fibrex® composite material. This construction produces a rigid frame.

B Durable, low-maintenance finish won't fade, flake, blister or peel.*

C Four frame options available, see page 16.

Sash

The operating sash has a meeting stile cover with a unique raised profile design, allowing the sash to be opened and closed easily.

D Fibrex material construction provides long-lasting performance.* The sash, finished with a durable capping, provides maximum protection and a matte, low-maintenance finish.

E Dual-felt weatherstrip provides a long-lasting*, energy-efficient barrier against wind, water and dust.

F Operating sash has four metal rollers mounted at the bottom of the sash for easy, smooth travel over the sill.

**Glass**

G A glazing bead and silicone provides superior weathertightness and durability.

H See page 16 for details.

Hardware**Sash Lock**

Gliding window sash lock engages automatically when operable sash is closed. The standard sash lock matches the window's interior color. An optional sash pull is available.

PICTURE, TRANSOM & SPECIALTY**Frame**

A Frame constructed with Fibrex composite material. This construction produces a rigid frame.

B Durable, low-maintenance finish won't fade, flake, blister or peel.*

C Four frame options available, see page 16.

**Glass**

D The glass is direct-set into the frame for superior weathertightness and durability.

E See page 16 for details.

Shapes

Along with rectangular windows, arch, Springline™ half circle, quarter circle and circle windows are available in both standard and custom sizes. Custom windows are also available in triangle, trapezoid, pentagon, octagon and unequal leg arch shapes.

ACCESSORIES Sold Separately**Hardware****Window Opening Control Device**

A window opening control device is available for casement, single-hung and gliding windows which limits sash travel to less than 4" (102) when the window is first opened. Available factory-installed or as a kit for field-application.

Vent Limiter

A vent limiter is available for awning windows which prevents opening the sash more than 4" (102). Available factory-installed or as a kit for field-application.

Open/Closed Sensors

Wireless open/closed sensors are available in white, Sandtone and dark bronze.

Grilles

Grilles are available in a variety of configurations. See page 13 for details.

Insect Screens

For casement and awning windows, insect screen frames are color matched to the product interior. For single-hung and gliding windows, stainless steel springs hold the insect screen tightly to the window frame and their frames are available in colors to match the product exteriors. Insect screens have charcoal gray fiberglass screen mesh.

TruScene® Insect Screen

Exclusive Andersen® TruScene insect screens provide over 50% more clarity than our conventional insect screen for a beautiful unobstructed view. They allow more fresh air and sunlight in, while doing a better job of keeping out small insects. Frame color for casement and awning windows matches the product interiors. Frame color for single-hung and gliding matches the product exteriors.

* Visit andersenwindows.com/warranty for details.

* "Window Dimension" always refers to outside frame to frame dimension.

** "Minimum Rough Opening" dimensions may need to be increased to allow for use of building wraps, flashing, sill panning, brackets, fasteners or other items. See page 109 for more details.

Dimensions in parentheses are in millimeters.

◊ Meet or exceed clear opening area of 5.7 sq.ft. or 0.53 m², clear opening width of 20" (508) and clear opening height of 24" (610). See table on pages 21-22.

Custom-size windows are available in 1/8" (3) increments. See page 88 for custom sizes and specifications.

Choose left, right or stationary as viewed from the exterior. In addition to venting shown, other standard configurations are available. Windows have one continuous outer frame.

Twin transoms are also shown. See pages 70-71 for more information.

Details shown on pages 23-24. Grille patterns shown on page 22.

1630-2	1930-2	2030-2	2330-2	2630-2	2930-2	3030-2	

Custom-size windows are available in 1/8" (3) increments. See page 88 for custom sizes and specifications.

Windows have one continuous outer frame.

Twin transoms are also shown. See pages 70-71 for more information.

Details shown on pages 28-29. Grille patterns shown on page 26.

• "Window Dimension" always refers to outside frame to frame dimension.
• "Minimum Rough Opening" dimensions may need to be increased to allow for use of building wraps, flashing, sill panelling, brackets, fasteners or other items. See page 109 for more details.
• Dimensions in parentheses are in millimeters.

Custom-size windows are available in $\frac{1}{8}$ " (3) increments. See page 89 for custom sizes and specifications.

Windows have one continuous outer frame.

For unobstructed glass height dimensions of lower sash, see page 25.

Details shown on pages 28-29.

Grille patterns shown below.

Grille Patterns

	Prairie A	Colonial	Modified Colonial*
Awning			
	Tall Fractional	Short Fractional	Victorian

*Modified colonial pattern is available only for the upper sash of a picture window over awning configuration.

Number of lights and overall pattern varies with window size. Patterns shown may not be available for all sizes. Specified equal light pattern is also available. For more information on divided light, see page 13 or visit andersenwindows.com/grilles.

Specified Equal Light Examples

• "Window Dimension" always refers to outside frame to frame dimension.

• **Minimum Rough Opening** dimensions may need to be increased to allow for use of building wraps, flashing, sill panning, brackets, fasteners or other items. See page 109 for more details.

• Dimensions in parentheses are in millimeters.

Custom-size windows

are available in $\frac{1}{8}$ " (3) increments. Contact your Andersen supplier for more information.

For arch single-hung windows, the size designation does not reflect the overall window height. (e.g., a 2026 window size has a side height of 2'-5 1/2" and an overall window height of 2'-8 5/8".)

Height dimensions for upper sash are to the right of each window size and lower sash are to the far left.

Details are shown on pages 48-51. Grille patterns shown on page 47.

continued on next page

* "Window Dimension" always refers to outside frame to frame dimension.

* Minimum Rough Opening dimensions may need to be increased to allow for use of building wraps, flashing, sill panelling, brackets, fasteners or other items. See page 109 for more details.

* Dimensions in parentheses are in millimeters.

♦ Meet or exceed clear opening area of 5.7 sq.ft. or 0.53 m², clear opening width of 20" (508) and clear opening height of 24" (610). See table on pages 31 and 33.

Table of Arch Single-Hung Window Sizes (continued)

Scale 1/8" (3) = 1'-0" (305) – 1:96

Window Width Dimension	1'-11 1/2"	2'-5 1/2"	2'-11 1/2"	3'-5 1/2"
Minimum Rough Opening	1'-11 1/2" (597)	2'-5 1/2" (749)	2'-11 1/2" (902)	3'-5 1/2" (1054)
Unobstructed Glass (width of upper sash)	2'-0" (610)	2'-6" (762)	3'-0" (914)	3'-6" (1067)
Unobstructed Glass (width of lower sash)	20" (508)	26" (660)	32" (813)	38" (965)
Radius	23 1/2" (597)	29 1/2" (749)	35 1/2" (902)	41 1/2" (1054)
Unobstructed Glass (height of lower sash shown below)	6'-11 1/2" (2121)	7'-2 5/8" (2200)	7'-3 1/2" (2223)	5'-1/2" (1460)
Chord Height	3 1/8" (79)	4" (102)	4 3/4" (121)	5 1/2" (140)
Side Height	24 11/16" (627)	55" (1397)	55 13/16" (1418)	56 9/16" (1437)
Min. Rough Opening = window height + 1/2"	(13)	2070	2670	3070
		7'-8 5/8" (2353)	59" (1499)	60 9/16" (1538)
		2076	2676	3076 [◊]
		7'-5 1/2" (2273)	59 13/16" (1519)	61 3/8" (1559)
		3076 [◊]	3076 [◊]	3676 [◊]

*"Window Dimension" always refers to outside frame to frame dimension.

*"Minimum Rough Opening" dimensions may need to be increased to allow for use of building wraps, flashing, sill panning, brackets, fasteners or other items.

See page 109 for more details.

• Dimensions in parentheses are in millimeters.

◊Meet or exceed clear opening area of 5.7 sq.ft. or 0.53 m², clear opening width of 20" (508) and clear opening height of 24" (610). See table on pages 31 and 33.

*For side heights greater than 6'-5 1/2" (1969), meeting rail location = (side height in inches x 0.33) + 1.96".

For arch single-hung windows,
the size designation does not
reflect the overall window height.

Height dimensions for upper sash
are to the right of each window size
and lower sash are to the far left.

Windows with a
side height greater
than 6'-5 1/2" (1969)
are only available with
a 2:1 reverse cottage
sash ratio.*

Details are shown on pages 48-51.

Grille patterns shown on page 47.

CUSTOM HEIGHTS						

continued on next page

Reverse cottage sash is available based on a 3:2 ratio. Available in standard widths for the heights shown below.

REVERSE COTTAGE CUSTOM WIDTHS – 1'-5 1/2"(445) to 3'-11 1/2"(1207)

REVERSE COTTAGE CUSTOM HEIGHTS – 2'-5 1/2"(749) to 6'-5 1/2"(1969)

Custom-size windows are available in $\frac{1}{8}$ " (3) increments. See page 89 for custom sizes and specifications.

Windows with a height greater than 6'-5 1/2" (1969) are only available with a 2:1 reverse cottage sash ratio.

For construction site convenience, an optional drywall pass-through window is available for removal and reinstallation of the upper and lower sash.

Size tables for windows with reverse cottage sash are available on andersenwindows.com.

Details shown on pages 48-51.

Grille patterns shown on page 47.

* "Window Dimension" always refers to outside frame to frame dimension.

• "Minimum Rough Opening" dimensions may need to be increased to allow for use of building wraps, flashing, sill panelling, brackets, fasteners or other items. See page 109 for more details.

• Dimensions in parentheses are in millimeters.

†Meet or exceed clear opening area of 5.7 sq.ft. or 0.53 m², clear opening width of 20" (508) and clear opening height of 24" (610). See table on page 39.

*For reverse cottage sash windows, meeting rail location = (window height in inches x 0.40) + 1.96".

**For heights greater than 6'-5 1/2" (1969), meeting rail location = (window height in inches x 0.33) + 1.96".

†Drywall pass-through window available for these standard and reverse cottage sizes and for custom-size windows wider than 1'-11 1/2" (597) and taller than 4'-5 1/2" (1359).

Windows with a height greater than 6'-5 1/2" (1969) are only available with a 2:1 reverse cottage sash ratio.**

For arch single-hung window

specifications, see pages 31 and 33.

For reverse cottage, twin and triple

single-hung window specifications,

see pages 41, 43 and 45.

• "Top of Subfloor to Top of Inside Sill Stop" is calculated based upon a structural header height of 6'-10 1/2" (2096).

• Dimensions in parentheses are in millimeters or square meters.

◊Meet or exceed clear opening area of 5.7 sq.ft. or 0.53 m²; clear opening width of 20" (508) and clear opening height of 24" (610).

*Available only with a 2:1 reverse cottage sash ratio.

Windows have one continuous outer frame.

Unobstructed glass width dimension of flanking sash is 11 1/4" (286). For unobstructed glass height dimensions of flanking single-hungs, see page 32.

Matching transoms are also shown.

Details shown on pages 48-51.

Grille patterns shown on page 47.

- "Window Dimension" always refers to outside frame to frame dimension.
- **Minimum Rough Opening** dimensions may need to be increased to allow for use of building wraps, flashing, sill panning, brackets, fasteners or other items. See page 109 for more details.
- Dimensions in parentheses are in millimeters.

See notes on previous page.

Windows have one continuous outer frame.

Unobstructed glass width dimension of flanking sash is 17 1/4" (438). For unobstructed glass height dimensions of flanking single-hungs, see page 32.

Matching transoms are also shown.

Details shown on pages 48-51.

Grille patterns shown on page 47.

- "Window Dimension" always refers to outside frame to frame dimension.
- **Minimum Rough Opening** dimensions may need to be increased to allow for use of building wraps, flashing, sill panning, brackets, fasteners or other items. See page 109 for more details.
- Dimensions in parentheses are in millimeters.

See notes on previous page.

Windows have one continuous outer frame.

Unobstructed glass width dimension of flanking sash is 23 1/4" (591). For unobstructed glass height dimensions of flanking single-hungs, see page 32.

Matching transoms are also shown.

Details shown on pages 48-51.

Grille patterns shown on page 47.

- "Window Dimension" always refers to outside frame to frame dimension.
- **Minimum Rough Opening** dimensions **must be increased to allow for use of building wraps, flashing, sill panning, brackets, fasteners or other items. See page 109 for more details.**
- Dimensions in parentheses are in millimeters.
- ♦ Meet or exceed clear opening area of 5.7 sq.ft. or 0.53 m², clear opening width of 20" (508) and clear opening height of 24" (610).

See notes on previous page.

Notes on this page also apply to previous page.

Windows have one continuous outer frame.

Unobstructed glass width dimension of flanking sash is 29 1/4" (743). For unobstructed glass height dimensions of flanking single-hungs, see page 32.

Matching transoms are also shown.

Details shown on pages 48-51.

Grille patterns shown below.

- "Window Dimension" always refers to outside frame to frame dimension.
- "Minimum Rough Opening" dimensions may need to be increased to allow for use of building wraps, flashing, sill panning, brackets, fasteners or other items. See page 109 for more details.
- Dimensions in parentheses are in millimeters.
- ◊Meet or exceed clear opening area of 5.7 sq.ft. or 0.53 m², clear opening width of 20" (508) and clear opening height of 24" (610).

Grille Patterns

	Prairie A	Colonial	Short Fractional
Single-Hung			

Single-hung window patterns are also available in Upper Sash Only (USO) configurations.

For picture window patterns that require alignment with single-hung patterns, identify the single-hung sash style (equal or reverse cottage) when ordering.

Number of lights and overall pattern varies with window size. Patterns shown may not be available for all sizes. Specified equal light pattern is also available. For more information on divided light, see page 13 or visit [andersonwindows.com/grilles](http://andersenwindows.com/grilles).

Custom-size windows are available in $\frac{1}{8}$ " (3) increments. See page 90 for custom sizes and specifications.

Choose active-stationary (**X0**) or stationary-active (**OX**) as viewed from the exterior. Two locks are standard on all heights greater than 4'-2" (1270). Details shown on pages 64-65. Grille patterns shown on page 63.

* "Window Dimension" always refers to outside frame to frame dimension.

** "Minimum Rough Opening" dimensions may need to be increased to allow for use of building wraps, flashing, sill panelling, brackets, fasteners or other items. See page 109 for more details.

Dimensions in parentheses are in millimeters.

◊Meet or exceed clear opening area of 5.7 sq.ft. or 0.53 m², clear opening width of 20" (508) and clear opening height of 24" (610). See table on pages 58-59.

Table of Sizes for Picture Window over Gliding – Active-Stationary or Stationary-Active (X0/0X)

Scale 1/8" (3) = 1'-0" (305) – 1:96

Window Dimension	2'-11 1/2"	3'-11 1/2"	4'-11 1/2"	5'-11 1/2"
Minimum Rough Opening	(902)	(1207)	(1511)	(1816)
Unobstructed Glass (upper sash only)	29 1/4" (743)	41 1/4" (1048)	53 1/4" (1353)	65 1/4" (1657)

Active-Stationary Stationary-Active

Choose active-stationary (**X0**) or stationary-active (**0X**) as viewed from the exterior. Windows have one continuous outer frame.

For unobstructed glass dimensions of lower sash, see page 52.

Details shown on pages 64-65.

Grille patterns shown on page 63.

- "Window Dimension" always refers to outside frame to frame dimension.
- "Minimum Rough Opening" dimensions may need to be increased to allow for use of building wraps, flashing, sill panning, brackets, fasteners or other items. See page 109 for more details.
- Dimensions in parentheses are in millimeters.

• "Top of Subfloor to Top of Inside Sill Stop" is calculated based upon a structural header height of 6'-10 1/2" (2096).

• Dimensions in parentheses are in millimeters or square meters.

◊Meet or exceed clear opening area of 5.7 sq.ft. or 0.53 m², clear opening width of 20" (508) and clear opening height of 24" (610).

* "Top of Subfloor to Top of Inside Sill Stop" is calculated based upon a structural header height of 6'-10 1/2" (2096).

• Dimensions in parentheses are in millimeters or square meters.

◊Meet or exceed clear opening area of 5.7 sq.ft. or 0.53 m², clear opening width of 20" (508) and clear opening height of 24" (610).

Custom-size windows are available in
1/8" (3) increments. See page 90 for
custom sizes and specifications.

Details shown on pages 81-83.

Grille patterns shown on page 77.

continued on next page

- "Window Dimension" always refers to outside frame to frame dimension.
- "Minimum Rough Opening" dimensions may need to be increased to allow for use of building wraps, flashing, sill panelling, brackets, fasteners or other items. See page 109 for more details.
- Dimensions in parentheses are in millimeters.

	3636	4040	4646	5050
	3636	4040	4646	5050

- "Window Dimension" always refers to outside frame to frame dimension.

"Minimum Rough Opening" dimensions may need to be increased to allow for use of building wraps, flashing, sill panning, brackets, fasteners or other items. See page 109 for more details.

- Dimensions in parentheses are in millimeters.

PICTURE, TRANSOM & SPECIALTY WINDOWS

These custom shapes are available in $\frac{1}{8}$ " (3) increments.

Design Criteria

Listed for each custom shape are factors that must be considered when deciding on a custom-shaped specialty window.

Details shown on pages 81-83. Grilles are available for most shapes and sizes in colonial and specified equal divided light patterns. For more information on divided light, see page 13 or contact your Andersen supplier.

Custom Unequal Leg Arch

Choose left-facing (1) or right-facing (2) as viewed from the exterior. Contains unequal legs, two right angles at the sill and an arch at the top.

Custom Trapezoid

Choose left-facing (1) or right-facing (2) as viewed from the exterior. Contains a slope to the left or right. Slope is often designed to match a roof's pitch.

Custom Peak Pentagon

Contains sides of equal length, extending at right angles from the sill, and two angled sides, of equal length, that peak above center of sill.

Custom-size design limitations:

Min/Max Window Width

17 $\frac{1}{2}$ " (445) to 95 $\frac{1}{2}$ " (2426)

Min/Max Window Height

11 $\frac{3}{8}$ " (289) to 95 $\frac{1}{2}$ " (2426)

Min/Max Short Side Height

9 $\frac{3}{4}$ " (248) to 93 $\frac{7}{8}$ " (2384)

Max Frame Area: 40 sq. ft. or 3.7 m²

Based on the smallest square or rectangular shape that covers the entire window.

Additional limitations may apply. Contact your Andersen supplier for more information.

Custom-size design limitations:

Min/Max Window Width

17 $\frac{1}{2}$ " (445) to 107 $\frac{1}{2}$ " (2731)

Min/Max Window Height

9 $\frac{7}{8}$ " (251) to 95 $\frac{1}{2}$ " (2426)

Min/Max Short Side Height

9 $\frac{3}{4}$ " (248) to 95 $\frac{3}{8}$ " (2423)

Max Frame Area: 40 sq. ft. or 3.7 m²

Based on the smallest square or rectangular shape that covers the entire window.

Additional limitations may apply. Contact your Andersen supplier for more information.

Custom-size design limitations:

Min/Max Window Width

17 $\frac{1}{2}$ " (445) to 107 $\frac{1}{2}$ " (2731)

Min/Max Window Height

14 $\frac{1}{8}$ " (359) to 107 $\frac{1}{2}$ " (2731)

Min/Max Side Height

9 $\frac{3}{4}$ " (248) to 94 $\frac{1}{8}$ " (2391)

Max Frame Area: 40 sq. ft. or 3.7 m²

Based on the smallest square or rectangular shape that covers the entire window.

Additional limitations may apply. Contact your Andersen supplier for more information.

* Dimensions in parentheses are in millimeters.

Custom Angled Pentagon

Choose left-facing (1) or right-facing (2) as viewed from the exterior. Contains an angle cut, or a "clipped corner" sloping to the left or right.

Custom-size design limitations:

Min/Max Window Width

17 1/2" (445) to 107 1/2" (2731)

Min/Max Top Width

9 3/4" (248) to 107 3/8" (2727)

Min/Max Window Height

14 3/8" (365) to 107 1/2" (2731)

Min/Max Short Side Height

9 3/4" (248) to 94 1/8" (226)

Max Frame Area: 40 sq. ft. or 3.7 m²

Based on the smallest square or rectangular shape that covers the entire window.

Additional limitations may apply. Contact your Andersen supplier for more information.

Custom Octagon

Contains eight equal angles and sides.

Custom Right Triangle

Choose left-facing (1) or right-facing (2) as viewed from the exterior. Contains one 90-degree angle.

Custom Isosceles Triangle

Contains two sides of equal length and two equal angles.

Custom-size design limitations:

Min/Max Window Width

17 1/2" (445) to 107 1/2" (2731)

Min/Max Window Height

23 1/2" (597) to 71 1/2" (1816)

Custom-size design limitations:

Min/Max Window Width

17 1/2" (445) to 95 1/2" (2426)

Min/Max Window Height

17 1/2" (445) to 95 1/2" (2426)

Additional limitations may apply. Contact your Andersen supplier for more information.

Custom-size design limitations:

Min/Max Window Width

17 1/2" (445) to 95 1/2" (2426)

Min/Max Window Height

17 1/2" (445) to 75 7/8" (1927)

Max Frame Area: 40 sq. ft. or 3.7 m²

Based on the smallest square or rectangular shape that covers the entire window.

Additional limitations may apply. Contact your Andersen supplier for more information.

Custom-size design limitations:

Min/Max Window Width

17 1/2" (445) to 107 1/2" (2731)

Min/Max Window Height

17 1/2" (445) to 75 7/8" (1927)

Max Frame Area: 40 sq. ft. or 3.7 m²

Based on the smallest square or rectangular shape that covers the entire window.

Additional limitations may apply. Contact your Andersen supplier for more information.

	2050	2650	3050	3650	4050	4650	5050

• "Window Dimension" always refers to outside frame to frame dimension.

• **Minimum Rough Opening** dimensions may need to be increased to allow for use of building wraps, flashing, sill panning, brackets, fasteners or other items. See page 109 for more details.

• Dimensions in parentheses are in millimeters.

Custom-size windows are available in $1/8"$ (3) increments. Contact your Andersen supplier for more information.

For Springline™ and arch windows, the size designation does not reflect overall window height. (e.g., a 2020 Springline window size has a side height of $1'-11 \frac{1}{2}"$ and an overall window height of $2'-11 \frac{1}{4}"$.)

Details shown on pages 81-83.
Grille patterns shown below.

Grille Patterns

	Colonial	Renaissance	Sunburst
Half Circle			
Quarter Circle			
Circle			
Springline™			
Arch			

Number of lights and overall pattern varies with window size. Patterns are not available in all configurations. Specialty window patterns may not align with picture window patterns when joined. Specified equal light pattern is also available for all shapes except quarter circle. For more information on divided light, see page 13 or visit andersenwindows.com/grilles.

Specified Equal Light Examples

	Prairie A	Colonial	Modified Colonial	Tall Fractional	Short Fractional	Victorian
Transom Picture						

- "Window Dimension" always refers to outside frame to frame dimension.
- "Minimum Rough Opening" dimensions may need to be increased to allow for use of building wraps, flashing, sill panelling, brackets, fasteners or other items. See page 109 for more details.

*Dimensions in parentheses are in millimeters.

WINDOWS

Vertical (ribbon) Fiberglass Joining Details – Non-Reinforced

Scale 1 $\frac{1}{2}$ " (38) = 1'-0" (305) – 1:8

Overall Window Dimension Width Sum of individual window widths plus 1 $\frac{1}{2}$ " (13) per join.

Overall Minimum Rough Opening Width Overall window dimension width plus 3 $\frac{1}{4}$ " (19).

The addition of joining materials will affect the overall rough opening dimension. See page 109.

*Rough openings may need to be increased to allow for use of building wraps, flashing, sill panning, brackets, fasteners or other items. See installation information on page 109.

*Details are for illustration only and are not intended to represent product installation methods or materials. Refer to product installation guides at andersenwindows.com.

*Structural performance of any combination is only as high as the lowest structural performance of any individual window or join in the combination.

*Dimensions in parentheses are in millimeters.

Horizontal (stack) Fiberglass Joining Details – Non-ReinforcedScale 1 $\frac{1}{2}$ " (38) = 1'-0" (305) – 1:8**Overall Window Dimension Width** Sum of individual window widths plus 1 $\frac{1}{2}$ " (13) per join.**Overall Minimum Rough Opening Width** Overall window dimension width plus 3/4" (19).**The addition of joining materials will affect the overall rough opening dimension. See page 109.**

For more information on joining, refer to the combination designs section on page 99.

- Rough openings may need to be increased to allow for use of building wraps, flashing, sill panelling, brackets, fasteners or other items. See installation information on page 109.
- Details are for illustration only and are not intended to represent product installation methods or materials. Refer to product installation guides at andersenwindows.com.
- Structural performance of any combination is only as high as the lowest structural performance of any individual window or join in the combination.
- Dimensions in parentheses are in millimeters.

WINDOWS

Custom Sizes & Specifications

100 Series custom-size windows are available in $\frac{1}{8}$ " (3) increments between minimum and maximum widths and heights shown. Some restrictions apply.

Casement Windows

Single

Clear Opening	Width = window width - 12.103" (307) <i>wash mode*</i> Width = window width - 7.790" (198) <i>widest clear opening*</i> Height = window height - 5.694" (145)	Minimum R.O.	Width = window width + $\frac{1}{2}$ " (13) Height = window height + $\frac{1}{2}$ " (13)
Vent Opening	Width = window width - 7.964" (202) Height = window height - 5.694" (145)	Unobstr. Glass	Width = window width - 6.250" (159) Height = window height - 6.250" (159)

Twin

Clear Opening	Width = (window width ÷ 2) - 12.353" (314) <i>wash mode*</i> Width = (window width ÷ 2) - 8.040" (204) <i>widest clear opening*</i> Height = window height - 5.694" (145)	Minimum R.O.	Width = window width + $\frac{1}{2}$ " (13) Height = window height + $\frac{1}{2}$ " (13)
Vent Opening	Width = window width - 16.428" (417) Height = window height - 5.694" (145)	Unobstr. Glass	Single Sash Width = (window width ÷ 2) - 6.50" (165) Total Sash Width = window width - 13.000" (330) Height = window height - 6.250" (159)

*Widest clear opening hinge will be applied, based on window size, if it allows the window to meet or exceed clear opening area of 5.7 sq.ft. or 0.53 m², clear opening width of 20" (508) and clear opening height of 24" (610). Hinge type cannot be specified.

Awning Windows

Single

Clear Opening	Width = window width - 5.694" (145) Depth = 8.000" (203)	Minimum R.O.	Width = window width + $\frac{1}{2}$ " (13) Height = window height + $\frac{1}{2}$ " (13)
Vent Opening	Width = window width - 5.694" (145) Depth = 8.000" (203)	Unobstr. Glass	Width = window width - 6.250" (159) Height = window height - 6.250" (159)

* Awning windows do not meet clear opening area of 5.7 sq.ft. or 0.53 m², clear opening width of 20" (508) and clear opening height of 24" (610).

Twin

Clear Opening	Width = (window width ÷ 2) - 5.944" (151) Depth = 8.000" (203)	Minimum R.O.	Width = window width + $\frac{1}{2}$ " (13) Height = window height + $\frac{1}{2}$ " (13)
Vent Opening	Width = (window width ÷ 2) - 5.944" (151) Depth = 8.000" (203)	Unobstr. Glass	Single Sash Width = (window width ÷ 2) - 6.50" (165) Total Sash Width = window width - 13.000" (330) Height = window height - 6.250" (159)

* Awning windows do not meet clear opening area of 5.7 sq.ft. or 0.53 m², clear opening width of 20" (508) and clear opening height of 24" (610).

* Dimensions in parentheses are in millimeters.

* **Clear Opening** formulas provide dimensions for determining area available for egress. **Vent Opening** formulas provide dimensions for determining area available for passage of air. **Minimum R.O.** (minimum rough opening) formulas provide minimum rough opening width and height dimensions. **Unobstr. Glass** (unobstructed glass) formulas provide dimensions for determining area available for passage of light.

Awning Windows (continued)

Contact your Andersen supplier for min/max height dimensions for lower venting sash.

Picture Window over Awning

Clear Opening	Width = window width - 5.694" (145) Depth = 8.000" (203)	Minimum R.O.	width = window width + 1/2" (13) Height = window height + 1/2" (13)
Vent Opening	Width = window width - 5.694" (145) Depth = 8.000" (203)	Unobstr. Glass	width = window width - 6.250" (159) Total Sash Height = window height - 13.000" (330) Contact your Andersen supplier for unobstructed glass height dimension of individual stationary sash or venting sash.

* Awning windows do not meet clear opening area of 5.7 sq.ft. or 0.53 m², clear opening width of 20" (508) and clear opening height of 24" (610).

Single-Hung Windows

Windows with a height greater than 77 1/2" (1969) are only available with a 2:1 reverse cottage sash ratio.*

Equal Sash Ratio

Clear Opening	Width = window width - 3.500" (89) Height = (window height ÷ 2) - 3.711" (94)	Minimum R.O.	width = window width + 1/2" (13) Height = window height + 1/2" (13)
Vent Opening	Equal Sash Ratio Width = window width - 3.500" (89) Height = (window height ÷ 2) - 3.711" (94)	Unobstr. Glass	Equal Sash Ratio Width = window width - 6.250" (159) Fixed Sash Height = (window height ÷ 2) - 4.184" (106) Venting Sash Height = (window height ÷ 2) - 4.226" (107) Total Sash Height = window height - 8.410" (214)

* Drywall pass-through window is available for custom-size windows wider than 23 1/2" (597) and taller than 53 1/2" (1359).
* Windows with a 3:2 reverse cottage sash ratio are available in custom sizes from 17 1/2" (445) to 47 1/2" (1207) in width to 29 1/2" (749) to 77 1/2" (1969) in height. For area and opening specification formulas, visit andersenwindows.com.
* Window heights that require a 2:1 reverse cottage sash ratio are available in custom sizes from 17 1/2" (445) to 47 1/2" (1207) in width to 77 5/8" (1972) to 89 1/2" (2273) in height. For area and opening specifications, contact your Andersen supplier.

Twin

Clear Opening	Width = (window width ÷ 2) - 3.750" (95) Height = (window height ÷ 2) - 3.711" (94)	Minimum R.O.	width = window width + 1/2" (13) Height = window height + 1/2" (13)
Vent Opening	Equal Sash Ratio Width = window width - 3.500" (89) Height = (window height ÷ 2) - 3.711" (94)	Unobstr. Glass	Single Sash Width = (window width ÷ 2) - 6.500" (165) Total Sash Width = window width - 13.000" (330) Fixed Sash Height = (window height ÷ 2) - 4.184" (106) Venting Sash Height = (window height ÷ 2) - 4.226" (107) Total Sash Height = window height - 8.410" (214)

Triple

Clear Opening	Width = (window width ÷ 3) - 3.833" (97) Height = (window height ÷ 2) - 3.711" (94)	Minimum R.O.	width = window width + 1/2" (13) Height = window height + 1/2" (13)
Vent Opening	Equal Sash Ratio Width = window width - 11.500" (292) Height = (window height ÷ 2) - 3.711" (94)	Unobstr. Glass	Single Sash Width = (window width ÷ 3) - 6.583" (167) Total Sash Width = window width - 19.750" (502) Fixed Sash Height = (window height ÷ 2) - 4.184" (106) Venting Sash Height = (window height ÷ 2) - 4.226" (107) Total Sash Height = window height - 8.410" (214)

*Dimensions in parentheses are in millimeters.

*Clear Opening formulas provide dimensions for determining area available for egress. Vent Opening formulas provide dimensions for determining area available for passage of air. Minimum R.O. (minimum rough opening) formulas provide minimum rough opening width and height dimensions. Unobstr. Glass (unobstructed glass) formulas provide dimensions for determining area available for passage of light.

WINDOWS

Gliding Windows

Active-Stationary or Stationary-Active (X0/0X)

Clear Opening	Width = (window width + 2) - 3.711" (94) 	Minimum R.O.	Width = window width + 1/2" (13) Height = window height + 1/2" (13)
Vent Opening	Width = (window width + 2) - 3.711" (94) Height = window height - 3.500" (89) 	Unobstr. Glass	Fixed Sash Width = (window width + 2) - 4.184" (106) Venting Sash Width = (window width + 2) - 4.226" (107) Total Sash Width = window width - 8.410" (214) Height = window height - 6.250" (159)

Active-Stationary-Active (XOX) 1:2:1 Sash Ratio

Clear Opening	Width = (window width + 4) - 2.976" (76) 	Minimum R.O.	Width = window width + 1/2" (13) Height = window height + 1/2" (13)
Vent Opening	Width = (window width + 2) - 5.952" (151) Height = window height - 3.500" (89) 	Unobstr. Glass	Fixed Sash Width = (window width + 2) - 1.868" (47) Venting Sash Width = (window width + 4) - 4.351" (111) Total Sash Width = window width - 10.570" (268) Height = window height - 6.250" (159)

Active-Stationary-Active (XOX) 1:1:1 Equal Sash Ratio

Clear Opening	Width = (window width + 3) - 5.164" (131) Height = window height - 3.500" (89) 	Minimum R.O.	Width = window width + 1/2" (13) Height = window height + 1/2" (13)
Vent Opening	Width = (window width x 2) / 3 - 10.328" (262) Height = window height - 3.500" (89) 	Unobstr. Glass	Fixed Sash Width = (window width + 3) - 3.496" (89) Venting Sash Width = (window width + 3) - 3.537" (90) Total Sash Width = window width - 10.570" (268) Height = window height - 6.250" (159)

Picture and Transom Windows

Triple transom windows with unequal sash are not available in custom sizes.

Picture and Single Transom

Minimum R.O.	Width = window width + 1/2" (13) Height = window height + 1/2" (13)
Unobstr. Glass	Width = window width - 6.250" (159) Height = window height - 6.250" (159)

Twin and Triple Transom

Minimum R.O.	Twin Width = window width + 1/2" (13) Height = window height + 1/2" (13) 	Triple Width = window width + 1/2" (13) Height = window height + 1/2" (13)
Unobstr. Glass	Twin Single Sash Width = (window width + 2) - 6.500" (165) Total Sash Width = window width - 13.000" (330) Height = window height - 6.250" (159) 	Triple Single Sash Width = (window width + 3) - 6.583" (167) Total Sash Width = window width - 19.750" (502) Height = window height - 6.250" (159)

*Dimensions in parentheses are in millimeters.

***Clear Opening** formulas provide dimensions for determining area available for egress. **Vent Opening** formulas provide dimensions for determining area available for passage of air. **Minimum R.O.** (minimum rough opening) formulas provide minimum rough opening width and height dimensions. **Unobstr. Glass** (unobstructed glass) formulas provide dimensions for determining area available for passage of light.

Dimensions in parentheses are in millimeters.

PATIO DOORS

FEATURES

GLIDING PATIO DOORS

Frame

A Frame constructed with Fibrex® composite material. This construction produces a rigid frame.

B Durable, low-maintenance finish won't fade, flake, blister or peel.

Factory-assembled doors arrive at the jobsite ready to install.

C Dual-felt weatherstrip, applied on the inside pocket of both side jambs and the head jamb, creates a positive seal between the frame and panels. The result is a long-lasting*, energy-efficient barrier against wind, water and dust.

A full-length combination weatherstrip/interlock system provides a flexible seal at the meeting stile.

Three frame options include:

- 1 3/8" (35) flange setback for siding applications. An integral rigid vinyl flange helps seal the unit to the structure.
- 1" (25) flange setback with stucco key. An integral rigid vinyl flange helps seal the unit to the structure.
- No-flange option for door replacement in an existing framed opening.

Sill

D One-piece sill design with weep holes located on the sill exterior provides superior water management. The heavy gauge PVC construction is wear-resistant and neutral gray in color.

E The roller track has a stainless steel cap that resists denting for smooth, reliable operation.

Panel

F Fibrex material construction provides long-lasting performance*. The panel, finished with a durable capping, provides maximum protection and a matte, low-maintenance finish.

G Dual corrosion-resistant* ball-bearing rollers on the operating door panel provide smooth operation with self-contained leveling adjusters. The rollers have deep grooves to increase engagement with the roller track and resist lateral movement. Metal reinforcement inserted into the panel stiles provides additional stability.

Glass

A glazing bead and silicone provides superior weathertightness and durability.

H High-Performance glass options include:

- Low-E SmartSun™ tempered glass
- Low-E SmartSun HeatLock® tempered glass
- Low-E tempered glass
- Low-E HeatLock tempered glass
- Low-E Sun™ tempered glass
- Dual-pane tempered glass

Additional glass options are available. Contact your Andersen supplier.

A removable translucent film helps shield the glass from damage during delivery and construction and simplifies finishing at the jobsite.

Patterned Glass

Patterned glass options are available. See page 12 for more details.

Hardware

Locking System

A two-point locking system engages a steel receiver plate that is secured into the side jamb. This provides enhanced security and a weathertight seal, with the operating panel pulled tightly into the jamb.

Tulsa and Afton hardware options are available. Tulsa hardware handles come in colors to match the exterior and interior colors of the door. Afton hardware has the same finish inside and out.

EXTERIOR

White Sandtone Terratone

Dark Bronze Black

INTERIOR

White Sandtone

Dark Bronze Black

HARDWARE FINISHES

Tulsa hardware matches the exterior and interior color options shown above.

Afton hardware available in these finishes:

Antique Brass Black Bright Brass Satin Nickel

HARDWARE OPTIONS

Tulsa Hardware

Exterior handle matches exterior door color. Shown in dark bronze.

Interior handle matches interior door color. Shown in white.

Optional Afton Hardware

Antique Brass | Bright Brass
Black | Satin Nickel

Bold name denotes finish shown.

ACCESSORIES Sold Separately

Hardware

Auxiliary Foot Lock

Provides an extra measure of security when the door is in a locked position. Available in colors that coordinate with the interior.

Grilles

Grilles are available in a variety of configurations. See page 13 for details.

Insect Screens

Insect screens are available with a charcoal gray fiberglass screen mesh and the frames are color-matched to the door exterior. The latch mechanism is contained within the insect screen handle for easy operation.

Sidelights & Transoms

Patio door sidelights and transoms are available for patio doors. See pages 95-96.

* Visit andersenwindows.com/warranty for details.

** Products with dark bronze, black and Sandtone interiors have matching exteriors.

Printing limitations prevent exact replication of colors and finishes. See your Andersen supplier for actual color and finish samples.

Three Patio Door Heights

Table of Gliding Patio Doors Sizes

Scale 1/8" (3) = 1'-0" (305) - 1:96

Door Dimension	4'-11 1/4" (1505)	4'-11 1/4" (1505)	5'-11 1/4" (1810)	5'-11 1/4" (1810)

PATIO DOORS

Custom Sizes & Specifications

100 Series custom-size patio doors and patio door sidelights and transoms are available in $\frac{1}{8}$ " (3) increments between minimum and maximum widths and heights shown. Some restrictions apply.

Gliding Patio Doors

To meet or exceed a clear opening width of 32" (813), select a custom-size door width that requires a rough opening width of 6'6" (1981) or greater.

Clear Opening	Width = (door width + 2) - 6.125" (156) Height = door height - 3.625" (92)	Minimum R.O.	Width = door width + 3/4" (19) Height = door height + 1/2" (13)	Unobstr. Glass	Single-Panel Width = (door width + 2) - 5.500" (140) Two-Panel Width = door width - 11.000" (279) Height = door height - 8.250" (210)

Patio Door Sidelights

Minimum R.O.	Width = sidelight width + 3/4" (19) Height = sidelight height + 1/2" (13)	Unobstr. Glass	Width = sidelight width - 8.048" (204) Height = sidelight height - 8.048" (204)

Patio Door Transoms

Minimum R.O.	Width = transom width + 3/4" (19) Height = transom height + 3/4" (19)	Unobstr. Glass	Width = transom width - 8.048" (204) Height = transom height - 8.048" (204)

* **Clear Opening** formulas provide dimensions for determining area available for egress. Vent opening, or area available for passage of air, is equal to clear opening. **Minimum R.O.** (minimum rough opening) formulas provide minimum rough opening width and height dimensions. **Unobstr. Glass** (unobstructed glass) formulas provide dimensions for determining area available for passage of light.
• Dimensions in parentheses are in millimeters.

Andersen® windows and patio doors make it easy to create a wide variety of combination designs.

Joined Combination Types

Ribbons are horizontal window combinations (vertical joins) where opposite ends (head and sill) of individual windows are fastened to the building structure. Stacks are vertical window combinations (horizontal joins) where opposite sides (both side jambs) of individual windows are fastened to the building structure. One-way configurations or two-way configurations are used in combination designs.

One-Way

Ribbon Combination

Stack Combination

Two-Way

Multiple Ribbon/Stack Combination

Two-way combinations exist when multiple vertical stacks and horizontal ribbons are joined together. Unlike one-way combinations, the adjacent sides (head and sill, or both side jambs) of individual units are not necessarily fastened directly to the building structure. Two-way combinations are joined with both vertical and horizontal joining material and may require reinforced joining materials and brackets depending on the local building code requirement for design wind load (measured in pounds per square foot, PSF).

Determining Design Wind Load Performance

Proper combination design in conformance with local wind load requirements is vital to the success of your project. To make sure a combination is safe and that it complies with local building codes, the combination design wind load performance capacity must be determined. Correctly determining this performance capacity involves the following three steps:

STEP 1: Determine Building Code Requirement

Make sure you have the proper local codes and have identified specified compliance values. This calculated value (PSF) will be used to determine if the combination will be acceptable (STEP 3).

STEP 2: Determine Product Performance

Compare product Design Pressure Rating data to the local building code (PSF) requirement. This will show whether the individual units in a combination design are acceptable.

STEP 3: Determine Combination Performance

This step helps determine whether a given product, size, configuration and joining material type will meet the local building code design wind load requirement. To determine what joining material type to use (non-reinforced or reinforced), compare the local building code design wind load requirement to the Design Wind Load Table value for a particular joining material on the following pages.

For a successful installation, designed to provide the required design pressure, it is important that Andersen joining materials and installation accessories be specified by a project architect or contractor. Andersen joining materials create a joining system that maintains the look of Andersen® products without sacrificing performance. Check with your Andersen supplier for more information.

The addition of joining materials will affect the overall rough opening dimension. See page 109. Instruction guides are available at andersenwindows.com. Read and follow instruction guides in their entirety.

Andersen Trim & End Caps – Interior trim is included with each joining kit for finishing the join on the interior. Exterior trim strip and trim strip end caps are included with each kit for finishing exterior join.

Materials vary depending on type of units being joined and wind load requirements. Non-reinforced joining materials are used to create alignment and positive joining between windows. Joining materials are not connected to the rough opening structure.

Reinforced joining materials are used to create product alignment, positive joining and load transfer between the Andersen windows and doors and the rough opening. They provide added strength capable of withstanding a variety of wind load pressures.

The structural performance of any combination is only as high as the lowest structural performance rating of any individual window or joining material in the combination. Please contact your Andersen supplier for specific performance and product recommendations.

COMBINATION DESIGNS

1-Way Non-Reinforced Fiberglass Joining

100 Series Windows: Picture to Picture, Casement to Casement, Awning to Awning, Casement to Picture, Awning to Picture

• Numerical values in charts represent structural pressure only.

• Structural performance of any combination is only as high as the lowest structural performance of any individual unit or joining material in the combination.

• Andersen products must be installed and anchored properly according to joining and installation guides to meet rated structural performance. Refer to product joining and installation guides at andersenwindows.com.

• Single transom windows use "picture" frame type. Integral transom windows use "single-hung" frame type. Combination performance should be determined accordingly.

• Dimensions in parentheses are in millimeters.

1-Way LVL Joining

100 Series Patio Doors: Gliding Patio Doors, Patio Door Sidelights & Transoms

Maximum rating is equivalent to +30/-30 PSF

- Numerical values in charts represent structural pressure only.
 - Structural performance of any combination is only as high as the lowest structural performance of any individual unit or joining material in the combination.
 - Performance of two-way combinations may be limited by non-reinforced joins 6' (1829) or greater in length. Verify performance of non-reinforced joins within two-way combinations using the appropriate non-reinforced joining table.
 - Andersen products must be installed and anchored properly according to joining and installation guides to meet rated structural performance. Refer to product joining and installation guides at andersenwindows.com.
 - Single transom windows use "picture" frame type. Integral transom windows use "single-hung" frame type. Combination performance should be determined accordingly.
 - All two-way joining requires both non-reinforced and reinforced elements. Intersecting reinforced or non-reinforced joints are not available.
 - Dimensions in parentheses are in millimeters.

PRODUCT PERFORMANCE

Andersen® Window and Patio Door Altitude Limits

The chart below gives the altitude limit in feet for 100 Series products. If the installation of a given product is at an altitude greater than that shown in this chart, a capillary breather tube must be ordered. Be aware that the use of a capillary breather tube eliminates argon gas blend fill and will result in a slightly lower thermal performance (approximately 0.02 increase in window U-Factor). For NFRC certified total unit performance on units with capillary breather tubes for higher altitude applications, please visit andersenwindows.com/nfrc.

The use of dual-pane insulating glass at altitudes higher than its rating will result in severe glass distortion, increased glass breakage potential and a risk for seal failure.

Smaller windows are most affected by altitude changes. An increase in altitude results in a decrease in atmospheric pressure. A sealed insulating glass unit attempts to combat this change by increasing its volume to reduce its pressure. One way to increase its volume is by glass deflection. A smaller window is stiffer and does not deflect as much as a larger window; therefore, it cannot relieve the pressure as readily. Thus, the load applied to the glass is greater, resulting in a greater risk for breakage. Another way the window tries to increase its volume is by increasing the edge area; i.e., the seal area. The increased pressure applied to the edge seal load for a smaller window is therefore greater, increasing the chance for seal failure.

- Deflection of glass will occur on units with larger glass areas.

- Altitude limits for patio doors shown in two-panel configurations. These limits also qualify for same size panels used in single panel configurations.

- Contact your Andersen supplier for altitude limits for custom-sized windows and doors.

- For NFRC ratings of units with capillary breather tubes, please visit andersenwindow.com.

PERFORMANCE STANDARDS

The Window and Door Manufacturers Association (WDMA), the American Architectural Manufacturers Association (AAMA) and the Canadian Standards Association (CSA) jointly release the North American Fenestration Standard/Specification for Windows, Doors and Skylights (NAFS-11) where "11" refers to the most recent publication year of 2011. NAFS is also referred to as AAMA/WDMA/CSA 101/I.S.2/A440, which is how the International Code Council (ICC) lists this standard in the 2012 and 2015 International Residential Code (IRC) and International Building Code (IBC) as the means to indicate the window, door or skylights design pressure rating used to determine compliance to the jobsite design pressure requirements.

A product only achieves a "Performance Grade" or "PG" rating when it complies with all of the NAFS performance requirements such as ease of operation, air infiltration resistance, resistance to water penetration and resistance to forced entry, etc. A "Design Pressure Rating" or "DP" rating only depicts the design and structural load performance.

Performance Classes

The NAFS Standard/Specification defines requirements for four performance classes. Performance classes are designated R, LC, CW, and AW. This classification system provides for several levels of performance. Product selection is always based on the performance and building code requirements of the particular project.

Elements of Performance Grade (PG) Designations

In order to qualify for a given performance grade (PG), test specimens need to pass all required performance tests for the following, in addition to all required auxiliary (durability) and applicable material/component tests (not shown here) for the applicable product type and desired performance class:

(a) Operating force (if applicable): Maximum operating force varies by product type and performance class.

(b) Air leakage resistance: Tested in accordance with ASTM E283 at a test pressure of 1.57 psf. Allowable air infiltration for R, LC and CW class designations is 0.3 cubic feet per minute per square foot of frame (cfm/ft²).

(c) Water penetration resistance: Tested in accordance with ASTM E547 with the specified test pressure applied per NAFS-11. Test consists of four cycles. Each cycle consists of five minutes with pressure applied and one minute with the pressure released, during which the water spray is continuously applied. Water spray shall be uniformly applied at a constant rate of 5 U.S. gal/ft² · hr.

(d) Uniform load deflection test: Tested in accordance with ASTM E330 for both positive and negative pressure (pressure defined by NAFS-11) with the load maintained for a period of 10 seconds. The test specimen shall be evaluated for deflection during each load for permanent damage after each load and for any effects on the normal operation of the specimen. Starting with the 2008 version of NAFS, design pressure (DP) will only represent the "uniform load deflection test".

(e) Uniform load structural test: Tested in accordance with ASTM E330 for both positive and negative pressure (pressure defined by NAFS-11) with the load maintained for a period of 10 seconds. After loads are removed, there shall be no permanent deformation in excess of 0.4% of its span and no damage to the unit, which would make it inoperable.

(f) Forced-entry resistance (if applicable): Tested in accordance with ASTM F588 (windows), F476 (swinging doors) and F842 (sliding doors) at a performance level 10 rating.

Performance Grades (PG) & Corresponding Test Pressures (psf)

Performance Class/ Performance Grade	Air Infiltration Test Pressure		Maximum Allowable Air Infiltration/ Exfiltration Rate		Water Penetration Resistance Test Pressure		Design Pressure		Structural Test Pressure

HALLMARK CERTIFICATION

The Window and Door Manufacturers Association (WDMA)-sponsored Hallmark Certification Program provides manufacturers with certification to the AAMA/WDMA/CSA 101/I.S.2/A440-11 Standard and is designed to provide builders, architects, specifiers and consumers with an easily recognizable means of identifying products that have been manufactured and tested in accordance with NAFS (AAMA/WDMA/CSA 101/I.S.2/A440) industry standards and other applicable performance standards. Conformance is determined by periodic in-plant inspections by a third-party administrator. Inspections include auditing licensee quality control procedures and processes and a review to confirm products are manufactured in accordance with the appropriate performance standards. Periodic testing of representative product constructions and components by an independent testing laboratory is also required. When all of the program requirements are met, the licensee is authorized to use the WDMA Hallmark registered logo on their certification label as a means of identifying products and their performance ratings.

Products successfully obtaining Hallmark Certification will be labeled with a three-part code, which includes performance class, performance grade and size tested. In addition to this mandatory requirement, you are allowed to list the design pressure on a separate line.

	Andersen Corporation 100 SERIES CASEMENT WINDOW Manufacturer stipulates certification as indicated below.
STANDARD	RATING
AAMA/WDMA/CSA 101/I.S.2/A440-11	Class LC ⁽¹⁾ – PG40 ⁽²⁾ – Size Tested 71.5 x 71.5 in. ⁽³⁾ DP+40/-45 ⁽⁴⁾
AAMA/WDMA/CSA 101/I.S.2/A440-08	Class LC ⁽¹⁾ – PG40 ⁽²⁾ – Size Tested 71.5 x 71.5 in. ⁽³⁾ DP+40/-45 ⁽⁴⁾

(1) – Performance Class

(2) – Performance Grade

(3) – Size Tested

(4) – Design Pressure

In the example above, the performance class is LC, the performance grade (PG) is 40 pounds per square foot (psf) and the size tested is 71.5" x 71.5". What this means to the specifier is, based on the performance grade chart, the laboratory-tested air infiltration was less than 0.3 cfm/ft² (test pressure is always 1.57 psf and the allowable airflow is 0.3 cfm/ft²), the product tested successfully resisted a laboratory water penetration test at a test pressure of 6.0 psf, the product tested successfully withstood a laboratory positive test pressure of 60 psf and a laboratory negative test pressure of 67 psf and the product tested passed the laboratory requirements for operational force and forced-entry resistance. Based on this test, all products of the same design that are smaller than the tested size can be labeled with this product performance rating.

IMPORTANT

Building codes prescribe design pressure based on a variety of criteria (i.e. windspeed zone, building height, building type, jobsite exposure, etc.). Design pressures derived from Performance Grade (PG) test requirements should be used to determine compliance to building code required design pressures. **Structural test pressures, which are tested at 1.5 times the design pressure, should not be used for determining design pressure code compliance.** In the example above, a PG 40 performance grade rating, which passes a 40 psf design pressure, should be used for determining code compliance, not the structural test pressure of 60 psf.

If you need further details about how Andersen® products perform to this standard, contact your Andersen supplier.

If you need further information about the AAMA/WDMA/CSA 101/I.S.2/A440-11 standard or the Hallmark Certification Program, please contact: WDMA, 330 N. Wabash Avenue Suite 2000, Chicago, IL 60611 Phone: 312-673-4828 Web: wdma.com

Where designated, Andersen products are tested, certified and labeled to the requirements of the Hallmark Certification Program. Actual performance may vary based on variations in manufacturing, shipping, installation, environmental conditions and conditions of use.

*Based on NFRC testing/simulation conditions using Windows v7.4.6.0 and NFRC validated spectral data. 0°F outside temperature, 70°F inside temperature and 15 mph wind.

1) Visible Transmittance (VLT) measures how much light comes through the glass. The higher the value, from 0 to 1, the more daylight the glass lets in. Visible Transmittance is measured over the 380 to 760 nanometer portion of the solar spectrum. 2) Shading Coefficient defines the amount of heat gain through the glass compared to a single layer of clear 1/8" (3 mm) glass. 3) Solar Heat Gain Coefficient (SHGC) defines the fraction of solar radiation admitted through the glass both directly transmitted and absorbed and subsequently released inward. The lower the value, the less heat is transmitted through the glass. 4) Relative Heat Gain is the amount of heat gain through a glazing incorporating U-Factor and Solar Heat Gain Coefficient. 5) Transmission Ultra-Violet Energy (TUV). The transmission of short-wave energy in the 300-380 nanometer portion of the solar spectrum. The energy can cause fabric fading. 6) Transmission Damage Function (TDF). The transmission of UV and visible light energy in the 300-600 nanometer portion of the solar spectrum. The value includes both the UV and visible light energy that can cause fabric fading. This rating has also been referred to as the Krochmann Damage Function. This rating better predicts fading potential than UV transmission alone. The lower the Damage Function rating, the less transmission of short-wave energy through the glass that can potentially cause fabric fading. Fabric type is also a key component of fading potential. 7) Percent relative humidity before condensation occurs at the center of glass, taken using center of glass temperature. 8) Inside glass surface temperatures are taken at the center of glass.

*This data is accurate as of June 2019. Due to ongoing product changes, updated test results, or new industry standards, this data may change over time. Contact your Andersen supplier for current performance information or upgrade options.

*Contact your Andersen supplier or visit andersenwindows.com/nfrc for center of glass performance data on windows with patterned glass, tempered glass and products ordered with capillary breather tubes.

1) U-Factor defines the amount of heat loss through the total unit in BTU/hr/ft².°F. The lower the value, the less heat is lost through the entire product. Window values represent non-tempered glass. Use of tempered glass can increase U-Factor ratings. See andersenwindows.com/nfrc for specific performance values. Door values represent tempered glass.

2) Solar Heat Gain Coefficient (SHGC) defines the fraction of solar radiation admitted through the glass both directly transmitted and absorbed and subsequently released inward. The lower the value, the less heat is transmitted through the product.

3) Visible Transmittance (VT) measures how much light comes through a product (glass and frame). The higher the value, from 0 to 1, the more daylight the product lets in over the product's total unit area. Visible Transmittance is measured over the 380 to 760 nanometer portion of the solar spectrum.

* NFRC ratings are based on modeling by a third-party agency as validated by an independent test lab in compliance with NFRC program and procedural requirements.

* This data is accurate as of June 2019. Due to ongoing product changes, updated test results, or new industry standards or requirements, this data may change over time. Ratings are for sizes specified by NFRC for testing and certification. Ratings may vary depending on unit size, use of tempered glass, different grille options, glass for high altitudes, etc.

* Values are for single units with given pane thickness and 3/4" (19mm) grilles for windows and 1" (25mm) grilles for door products.

About the NFRC

The National Fenestration Rating Council (NFRC) is a nonpartisan coalition of professionals whose purpose is to provide fair, accurate and credible energy performance ratings for fenestration products. NFRC's membership includes manufacturers, suppliers, designers, specifiers, utility companies, government agencies and other building industry representatives.

Andersen Corporation is a founding member of the NFRC and continues to support its work by providing fair, accurate and credible energy performance ratings to consumers and the building industry. If you have any questions about the NFRC, its program or energy performance ratings, write them at: NFRC, 6305 Ivy Lane, Suite 140, Greenbelt, MD 20770. Tel: (301) 589-1776 Website: www.nfrc.org

About the Label

Look for this certification label on every window and patio door you buy. The NFRC section was designed by the National Fenestration Rating Council to provide accurate information that helps you promote the energy efficiency of the homes you build. These ratings allow you – and your customers – to measure and compare the energy performance of similar products. If the product does not have this label, the NFRC has not verified its claims.

Energy Rating (ER) represents "Energy Rating" and is a rating used in Canada for product comparison purposes (the higher the ER number, the more energy saved during the heating season).

ENERGY STAR® Climate Zone Map is based on U-Factor and solar heat gain coefficient criteria for specific ENERGY STAR climate zones within the United States and Canada. The shading of the map shows which climate zone(s) a particular product and glass type is ENERGY STAR certified in.

Solar Heat Gain Coefficient measures how well a product blocks heat caused by sunlight (the lower the number, the more it will help reduce the use of air conditioning and as a result, reduce electrical bills and energy use).

Performance Grade (PG) and Design Pressure (DP) Ratings

Glass Construction used with this product type.

* NFRC ratings are based on modeling by a third-party agency as validated by an independent test lab in compliance with NFRC program and procedural requirements.

INSTALLATION ACCESSORIES

Listed are optional accessories available for the installation of Andersen® windows and doors. You'll also find key considerations regarding the use and installation of every Andersen product on the following pages. Keep the instruction guidelines and safety information in mind when considering the installation and use of any Andersen product. Should you have any questions, contact your local Andersen supplier. Thank you for considering and using Andersen.

ACCESSORY	LENGTH	DEPTH	WIDTH
Fibrex® Trim Board	120" (3048)	3/4" (19)	3 1/2" (89)
Auxiliary Casing	150" (3810)	1 3/16" (30)	1 3/16" (30)
Rigid Vinyl "H" Channel, White	84" (2134) 150" (3810)	3/4" (19)	1" (25)
Rigid Vinyl "H" Channel, Sandtone & Terratone	84" (2134) 150" (3810)	3/4" (19)	3/4" (19)
Rigid Vinyl "h" Channel	150" (3810)	1/2" (13)	1" (25)
Rigid Vinyl "J" Channel	150" (3810)	1/2" (13)	3/4" (19)

CONTINUOUS DRIP CAP

Heavy 24-gauge corrosion-resistant aluminum construction in two profiles to match frames. Available in white, canvas, Sandtone, Terratone, forest green, dark bronze and black. Available in 6' (1829), 10' (3048) and 12'- 7 1/8" (3848) lengths.

FIBREX TRIM BOARD

Available in white, canvas, Sandtone, Terratone, dark bronze, forest green, dove gray, prairie grass, red rock, cocoa bean and black, this solid trim board can be cut or ripped to size and can be fastened using nails or screws.

AUXILIARY CASING

Auxiliary casing is made of cellular Fibrex material. Available in white, canvas, Sandtone, Terratone, forest green, dark bronze and black.

VINYL CHANNELS

Rigid vinyl "J," "h" and "H" channels are available in white, Sandtone and Terratone.

COIL STOCK

Andersen aluminum coil stock (shown below with insert window installation accessories) can be ordered in white, canvas, Sandtone, Terratone, dark bronze, forest green, dove gray, prairie grass, red rock, cocoa bean and black colors. Made from .018" thick Andersen aluminum, coil stock is available in 24" (610) x 50' (15240) rolls. Color-matched 1 1/4" (32) stainless steel trim nails are also available and can be ordered in 1 lb./.454 kg boxes.

COLOR-MATCHED SEALANT

Color-matched sealant is available in Andersen exterior colors. This high-quality sealant can be used during the installation of all Andersen products.

INSTALLATION ACCESSORIES FOR INSERT WINDOWS

EXTERIOR SILL EXTENDER

Sill extender fits into the exterior accessory kerf in the window frame to hide the gap between the new insert window and the existing window frame at the sill. Precut to fit a 14° sill slope, it can be cut to fit other slopes as needed. Available in all exterior colors. Shown in white.

HEAD EXPANDER

Head expander assists in filling the opening at the top of the window when doing an interior installation. Available in white.

COIL STOCK

Coil stock fits into the exterior accessory kerf in the window frame, then wraps the existing wood window trim. Cut and form the profile at the jobsite. Andersen aluminum coil stock can be ordered in white, canvas, Sandtone, Terratone, dark bronze, forest green, dove gray, prairie grass, red rock, cocoa bean and black colors. Made from .018" thick aluminum, coil stock is available in 24" (610) x 50' (15240) rolls. Color-matched 1 1/4" (32) stainless steel trim nails are also available and can be ordered in 1 lb./.454 kg boxes.

COLOR-MATCHED SEALANT

Color-matched sealant is available in Andersen exterior colors and is specially formulated to adhere to Andersen products.

FOAM BACKER ROD

Available for installations, 3/8" (10) backer rod helps provide an air seal around the frame. Available in 100' (30480) rolls.

SHIMS

Flat self-hanging shims help with a secure installation. Available in boxes of 248 shims.

EXTERIOR FRAME EXTENDERS

Frame extenders fit into the exterior accessory kerf in the frame to hide the gap around the sides and/or head between the new insert window and the existing window frame. Cut to fit width and length needed. Available in all exterior colors. Shown in dark bronze.

Window shown with exterior frame and sill extenders in dark bronze.

INSTALLATION INFORMATION

ROUGH OPENINGS

The purpose of a rough opening is to allow for proper spacing between the window or patio door unit and the building structure. The space is required for locating, leveling and squaring the unit during installation and to provide an area for insulation. A rough opening that is incorrectly sized may affect unit operation and may not allow for adequate fastening of the unit to the building structure. Andersen minimum rough opening dimensions are provided as a guideline to help determine the minimum amount of space needed between the window or patio door and the building structure. See appropriate product sections for rough opening guidelines for each product.

Keep in mind that rough opening dimensions may need to be altered from published guidelines, depending on installation methods, joining methods, replacement methods, etc. For example, flashing systems can reduce the amount of available rough opening space and should be factored in when calculating rough opening dimensions. The use of support or joining materials will encroach on the rough opening and may require additional rough opening space between the unit and the building structure, depending on the thickness of the flashing system and joining materials used. To facilitate drainage, the rough opening sill plate should never slope toward the interior. For challenging environments and other information, refer to Energy and Environmental Building Association's (EEBA) Water Management Guide (www.eeba.org).

Example of window sill flashing in a membrane drainage system.

Example of window unit installed using Andersen published minimum rough opening dimensions.

Example of two units joined together with the use of gusset plates and pan head screws that will require additional rough opening space. Rough opening for joined units must be a minimum of $\frac{3}{4}$ " (19) plus the overall joined window dimensions.

IMPORTANCE OF PROPER INSTALLATION

Proper installation and maintenance of Andersen® products are essential to attain optimum performance and operation. Installation instructions that provide guidelines for proper installation are typically provided with Andersen products. They are also available by visiting andersenwindows.com. Remember that every installation is different, and Andersen strongly recommends consultation with the local supplier or an experienced contractor, architect or structural engineer prior to the installation of any Andersen product. The method of attachment for Andersen products, fastener selection and code compliance are the responsibility of the architect, building owner, contractor, installer and/or consumer. For more complete installation details, visit andersenwindows.com or see your Andersen supplier.

INSTALLATION INFORMATION

GENERAL NOTES

When ordering, make certain you specify, then verify, the exact product, unit dimensions, configuration requirements, color and options you desire on each window or patio door. Before installing the product, we suggest you verify that it includes the features and options you ordered. Visit andersenwindows.com for product installation and joining guides. Printing limitations prohibit exact color duplication of products. View actual samples for building specifications. Andersen Corporation reserves the right to change details, specifications or sizes without notice. The customer assumes all risk of alterations made to Andersen® products.

CODES

Appropriate selection of Andersen products that conform to all applicable laws, ordinances, building codes and safety requirements is the sole responsibility of the architect, designer, building owner and/or contractor. Check with your local building code officials for specific information. Unit wind load, performance grade and energy performance information is provided on pages 103-107. For up-to-date product performance information, visit andersenwindows.com. The performance of any building system depends on the design and construction of the building system in its entirety, which should meet building code requirements, as well as address product and material limitations and local environment and climate.

Drip caps

Drip caps are a specific type of flashing or trim that is used at the head of a window or door to direct water from the drainage plane out beyond the face of the unit.

FLASHING

Flashing is an important element in a building's water management system. It is used to shed and direct water to the building exterior or to the drainage plane. Flashing materials are typically applied starting from the bottom and working upward, with each successive layer overlapping the previous one in shingle fashion. Water infiltration problems in any type of building can be reduced by properly flashing and/or sealing around all building openings, including windows and doors.

USE OF SHIMS

Shims are often used along the side jambs of windows and doors to center the unit in the rough opening and to position it plumb, level and square. In addition, shims are always required for windows only under the sill at the side jambs to lift it off the rough opening sill plate. Shims also enable a straight frame for proper weatherstrip contact and unit operation. If not placed properly, unit performance and operation can be affected. Use waterproof shims capable of supporting the weight of the product. When using tapered shims, use them in pairs with the tapers opposing each other to avoid tilting the unit or twisting (rotating) of the jambs.

SEALANTS

Sealants are elastic materials used to block the passage of water and/or air while allowing movement between the two sides of the joint. A sealant should bond tightly and be able to expand and contract to accommodate joint movement without cracking or tearing away from the substrate. Surfaces must be clean, dry and sound for adequate sealant adhesion. Choose a sealant that is compatible with, and that will adhere adequately

to, all building materials used in the window and patio door area. Proper sealant joint design is based upon the expected movement of adjacent materials and the movement capability of the sealant. A general rule of thumb is that the depth of the sealant joint should be equal to half the width ($D = W/2$), but generally not less than $\frac{1}{4}$ " (6) or more than $\frac{1}{2}$ " (13). Foam-plastic backer rod can be used to limit the depth of the sealant joint, to provide a backstop for tooling the sealant without damage to the bond. It also acts as a bond breaker to help minimize stress in the sealant. Sealants should be maintained seasonally and repaired and/or replaced as needed.

GENERAL INSTALLATION GUIDELINES

1. Read and follow the installation guide in its entirety.
2. Decide whether you are integrating to a surface barrier or a membrane drainage system before installing the product. The appropriate method for your installation may vary based on building design, application and industry practices.
3. Make certain the drainage plane is continuous (proper overlaps to shed water, taped seams, etc.).
4. Andersen products should be installed only in the vertical position.
5. Check the rough opening to make sure it is sized properly, is square and is level.
6. Install the window plumb.
7. Install the window level.
8. Install the window square. Diagonal measurements should be within $\frac{1}{8}$ " (3).
9. Follow installation instructions to properly locate shims and to make sure that units are plumb, level and square. Shims are always required under the window jambs at the sill and along the jambs on the sides.
10. Check for squareness of unit before final anchoring of the product into the wall.
11. Anchor window as directed with appropriate fasteners.
12. Integrate the window into the drainage plane of the wall using quality flashing and sealing materials. All flashing materials should be properly overlapped to shed water.
13. Allow $\frac{1}{4}$ " (6) minimum space for a sealant joint around perimeter of unit between exterior cladding/siding and unit.
14. Insulate and seal the interior cavity between the window frame and the rough opening.
15. Check unit operation before application of interior trim.

EXTERIOR PAINTING/SEALING OF ANDERSEN PRODUCTS

The exterior of some Andersen products may be painted or stained. However, improper painting and staining may cause damage to vinyl, aluminum and other exterior materials.

CAUTIONS

1. Do not apply any type of film to insulating glass. Thermal stress and glass damage can result. Andersen Corporation is not responsible for product performance when films are applied to Andersen products.
2. The use of removable insulating materials such as insulated window coverings, shutters and other shading devices may also cause thermal stress conditions and/or deformation of protective vinyl. In addition, excessive condensation may result, which can have a deteriorating effect on the window or patio door unit(s) involved. Andersen Corporation is not responsible for product performance when these kinds of

materials or devices are applied to or used in conjunction with Andersen products.

3. In wall construction utilizing brick facades, leave adequate clearance between sill, jambs and brick for sealing and dimensional change of framework.
4. Acid solutions commonly used to wash brick and other masonry materials will damage glass, fasteners, hardware and metal flashing. Protect unit and follow cleaning product instructions carefully. Damage caused by acid solution is not covered under the Andersen limited warranty.
5. Andersen windows may be combined in ribbons or stacks if each unit is positively secured to structural elements on opposing sides and if the proper joining system is used. See page 99-101 for more information.

SAFETY GLASS

Unless specifically ordered, Andersen windows are not made with safety glass and, if broken, the glass could fragment, causing injury. Andersen windows may be ordered with tempered glass which may reduce the likelihood of injury when broken. All Andersen patio doors are made with tempered glass. Differences in appearance between tempered and non-tempered glass can be expected. Slight visual distortions may be noticeable and occur normally as a result of the tempering process. Building codes require safety glass in locations adjacent to or near doors and other locations.

WINDOW AND PATIO DOOR SAFETY

Windows may provide a secondary avenue of escape or rescue in an emergency, such as a fire. Every family should develop an escape plan and make sure family members know how to escape from the home in an emergency. In your plan, include two ways to escape from every room in case one way is blocked by fire or smoke, and make sure you have a designated meeting place outside. A window or a door is an alternate means of escape or rescue. Practice your plan until each member of the family understands it and is able to escape without assistance. Remember, you may not be able to reach children during a fire emergency. Teach children - even very young children - that they must escape from a fire in the home and never hide from the fire or from emergency personnel.

LOOKOUT FOR KIDS® PROGRAM

The Consumer Product Safety Commission has said: "Keep children away from open windows to prevent falls. Don't depend on insect screens to keep the child from falling out of the window. They are designed to keep insects out, not children in. Avoid placing furniture near windows to keep children from climbing to a window seat or sill." In an effort to educate consumers about the potential for child falls from windows, Andersen Corporation created the LookOut For Kids Program. It combines a window and door safety brochure and specific product instructions to help make window and door safety an important priority for consumers. For more information on child safety, write:

THE ENVIRONMENT HAS A BUSINESS PARTNER

Respect for the environment is nothing new at Andersen. For more than a century, it's been part of who we are. Our commitment to recycle and reclaim materials began simply because it was good business. Now it's part of our broader commitment to sustainability and responsible stewardship of all our resources. Andersen is committed to providing you with long-lasting*, energy-efficient windows and patio doors. Visit andersenwindows.com/sustainability for more information.

Andersen® products are certified under the National Fenestration Rating Council's voluntary third-party certification program designed to ensure accurate energy performance ratings and labeling.

The Window & Door Manufacturers Association (WDMA) Hallmark Certification program includes product testing and quality-control process audits to verify that Andersen windows and doors are produced in conformance with the industry standards for air, water resistance and structural performance.

Andersen Corporation is proud to be an ENERGY STAR® partner. For over 115 years, Andersen has built a reputation for environmental stewardship and energy-efficient products. In fact, Andersen has been part of the ENERGY STAR program since it started and was the first window manufacturer to be named an ENERGY STAR National Window Partner of the Year in 1999.

Andersen was the first window manufacturer to certify our products for indoor air quality, beginning in 2008. Our Indoor Advantage™ Gold certification by SCS Global Services (SCS) meets the rigorous high standards for healthier indoor air quality set by the California Specification 01350.

Under U.S. Green Building Council (USGBC) guidelines, Andersen is able to claim a percentage of material in its Fibrex® product as pre-consumer recycled content. SCS Global Services (SCS) has certified this amount for Andersen.

Andersen® windows and doors can make significant contributions to the success of sustainable design strategies.

As a charter member of the U.S. Green Building Council, we are active supporters of certified green buildings. Our products can help customers in pursuing green building programs, such as Leadership in Energy and Environmental Design (LEED®), the National Green Building Standard, Green Globes, GreenStar and more.

Below is an overview of how our products may assist project teams with pursuing LEED v4 or the NAHB National Green Building Standard rating systems. More detailed credit summaries, as well as information about how Andersen products can support earlier versions of LEED certification (e.g., LEED v3 or LEED 2008), are available at andersenwindows.com.

LEED v4 FOR BUILDING DESIGN AND CONSTRUCTION: NEW CONSTRUCTION AND MAJOR RENOVATIONS

Integrative Process Credit: Energy & Atmosphere

- Minimum energy performance prerequisite
- Optimize energy performance credit
- Renewable energy production credit
- Green power and carbon offsets credit

Materials & Resources

- Construction and demolition waste management planning credit
- Building product disclosure and optimization sourcing of raw materials credit
- Construction and demolition waste management credit

Indoor Environmental Quality

- Minimum indoor air quality performance prerequisite
- Minimum acoustic performance prerequisite – schools
- Enhanced indoor air quality strategies credit
- Low-emitting materials credit
- Thermal comfort credit
- Daylight credit
- Quality views credit
- Acoustic performance credit (option 2)

LEED v4 FOR BUILDING DESIGN AND CONSTRUCTION: HOMES AND MULTI-FAMILY MIDRISES

Energy & Atmosphere

- Minimum energy performance prerequisite
- Education of the homeowner, tenant or building prerequisite
- Annual energy use credit
- Building orientation for passive solar credit
- Air infiltration credit
- Windows credit

Materials & Resources

- Durability management prerequisite
- Environmentally preferable products credit
- Construction waste management credit

Indoor Environmental Quality

- Ventilation prerequisite
- Low-emitting products credit

ANSI ICC/ASHRAE 700-2015 NATIONAL GREEN BUILDING STANDARD

NGBS section numbers are referenced in parentheses.

Resource Efficiency

- Prefinished materials (601.7)
- Flashing (602.12)
- Exterior doors, including storm doors (602.1.10)
- Recycled construction materials (605.3)
- Bio-based products (606.1)
- Wood-based products (606.2)
- Manufacturer's environmental management system concepts (611.1)

Energy Efficiency

- Mandatory requirements (701.1)
- Building thermal envelope air sealing (701.4.3.1)
- Multi-family air leakage alternative (701.4.3.3)
- Fenestration air leakage (701.4.3.4)
- ICC IECC analysis (702.2.1)
- Energy performance analysis (702.2.2)
- UA improvement (703.2.1)
- Fenestration (703.2.5)
- Sun-tempered design (703.7.1)
- Passive cooling design (703.7.3)
- Passive solar heating design (703.7.4)

Indoor Environmental Quality

- Wood materials (901.4)
- Interior architectural coatings (901.9)
- Interior adhesives & sealants (901.10)
- Operable windows & sliding glass doors (902.1.5)

Energy Efficient

- Homeowner's manual (1001.1)
- Building construction manual (1002.1)

91 100 Series Patio Door Overview	88 100 Series Window Custom Sizes	84 100 Series Window Joining Details	66 100 Series Picture, Transom & Specialty Windows	52 100 Series Gliding Windows	30 100 Series Single-Hung Windows	18 100 Series Casement & Awning Windows	15 100 Series Window Overview

PDF NAVIGATION TIPS

Welcome to an overview of the enhanced navigation tools available in this PDF. Here are some simple tips on PDF navigation. Before you begin be sure you are using the latest version of **Adobe Acrobat Reader DC**, available at - <https://get.adobe.com/reader/>

To watch a 3-minute tutorial on navigating catalog PDFs, go to: <https://youtu.be/sWWnYn6ON3Y>

BOOKMARK NAVIGATION

①

Acrobat will display the bookmarks panel when you open the PDF.

Bookmarks are the easiest way to find specific product information.

Select a topic and that page will be displayed.

②

If you need to print a specific section, **right click on that section** within in the bookmarks panel and choose “**Print Section**.”

LINKS AND URL NAVIGATION

①

You can also use the **embedded links** to navigate between sections. All links are underlined in blue.

②

Website links automatically open in your web browser.

Beauty in the Details.

The hardware for our A-Series windows is created exclusively for Andersen and is made of forged metal for added strength. A range of available finishes makes it easy for customers to coordinate their window hardware with their cabinet hardware, faucets and other room décor.

Also available with VeriLock® Security Sensors, one of the most advanced technologies in the industry. For more information, see [pages 16-17](#) or visit andersonwindows.com/connect.

The tilt-in feature of A-Series allows one-hand operation

Add additional navigation tools by adjusting the default settings in Acrobat.

TOOL BAR NAVIGATION

1

To add a “Jump Back” Button to your tool bar, **Right click on tool bar**, select **Show Page Navigation Tools** and choose **Show All Page Navigation Tools**.

Right and left facing arrows are added to the tool bar allowing you to go back or forward to the last page you viewed.

2

Another helpful tool is the **Loupe Tool**. It allows you to zoom in on the page without having to increase the page size.

To add a **Loupe Tool** to your tool bar, **right click on tool bar**, select **Show Select & Zoom Tools** and then choose **Show All Select & Zoom Tools**.

3

You can also use the **commenting tools**. Add a post-it-note with your comments or highlight important information.

Be sure to save the file.
